

# Is satellite broadband right for me?

**Are you constantly frustrated by slow, no or unreliable broadband? Unsure whether the government fibre roll out will ever reach you? Would you like to do more online?**

If you have answered yes to to one or more of these questions the chances are satellite broadband is right for you and this handy guide will give you all you need to know.

Choose to go ahead and Avonline can get you connected and up to speed fast wherever you live in Ireland.

**AvonlineBroadband**   
Fast Satellite Broadband everywhere. Since 2002.

# Introduction

**With each passing year, the internet takes on a bigger role in day-to-day life. For everyday connected life such as running a business, kids doing their homework or just keeping up with friends and family, films or football, a reliable broadband connection is more important than ever.**

However, not every home or business, can get a decent quality fixed line connection to enjoy the full power of the internet.

This is because the old copper network (ADSL) is just not up to the job and the new fibre optic technology required to deliver super-fast broadband speeds is expensive and time-consuming to install.

Unfortunately, that means that it is just not commercially viable for it to be rolled out in many rural and remote areas and even some urban locations.

As a result, more and more people just like you are now being told that they will not receive a superfast fibre upgrade “in the foreseeable future”. Many people are now refusing to struggle on with the frustration of bad broadband any longer and have discovered that there are already real alternatives available for them.

One such alternative is Avonline’s satellite broadband service. You may have heard of this technology, but are not sure exactly how it works and what’s involved.

With 100 % UK and Ireland coverage, Avonline only use the latest technology delivering the fastest satellite broadband services in Europe.

**Read on and find out why this service might be just what you need to get connected to better broadband – fast.**

## What is satellite broadband?

Before you can decide if Avonline is the right choice for you, it’s important to understand what satellite broadband is and how it works.

The concept is simple. Rather than use a copper or fibre line connected to your house, you use a small satellite dish at your home to safely transfer information to and from a satellite in space.

As the satellite is positioned high in space it means that it can immediately provide coverage to 100 % of the UK and Ireland, something no other network can do.

The dish is connected to a modem via a single wire, the modem is then plugged into your computer or wireless router and you’re online.

Satellite is already used by several million customers around the globe for broadband.

Looking forward, it will become even more commonplace as the need to achieve 100 % connectivity can only be met by using satellite broadband more widely.

# What are the advantages of satellite?

## Speed

Avonline offers Ireland's only satellite broadband service with an average speed guarantee. If we can't deliver an average of 9Mbps measured over all our customers on a rolling 30 day basis you can cancel your contract.

## Flexible Data

Packages range from 5GB to 150GB per month and many packages offer unlimited overnight data allowances.

## Availability

Satellite already offers fast broadband coverage to 100 % of Ireland – guaranteed. And you can usually get installed in about a week.

## Affordability

Although satellite will never be as inexpensive as ADSL, packages start at just €24.95 per month.

## No phone line required

Most ADSL and fibre broadband services require a compulsory phone line rental. You can save over €230 every year by choosing satellite as Avonline do not.

## Fibre Guarantee

Avonline Broadband offers a quick and easy switch to fibre guarantee giving you the flexibility you need if you do get fibre in the future.

## Why is satellite so well suited to rural areas?

From 22,000 miles high, the satellite can "connect" to every square mile of Ireland with the same quality and speed of service. And because every fixed line (copper or fibre) network must have a cable every inch of the way to your home or business, no fixed line network can ever offer 100 % coverage.

With satellite, one small dish attached to your home means you can access the same speeds whether you're on a remote mountain side or in the heart of the city.

# What does Avonline offer?

**Avonline plc has delivered telecoms services for almost 35 years. Their satellite broadband team started in 2002 and they provide satellite broadband to more customers in the UK and Ireland than any other provider.**

Avonline Broadband offers a wide range of packages with some features that are unique to the Irish market. They also offer a range of Avanti packages, from 5GB to 150GB per month, that are covered by their unique average speed guarantee. Their UK based helpdesk, provides straight-forward advice from first enquiry, through to free technical support if you need help.

## Fast speeds

Not only does Avonline offer the fastest satellite services in Europe, they are the only satellite broadband company in Ireland to offer an average speed guarantee. On their Avanti services, their target is to deliver an average speed of 9Mbps measured across ALL of their Avanti customers on a rolling 30 day basis. If they can't achieve this and you want to end your contract, you just provide Avonline with 7 days written notice to leave - it's that simple - guaranteed.

## Lowest prices

As one of Europe's largest satellite broadband providers, Avonline aim to provide a wide range of packages at the lowest prices.

Avonline also offers flexible contract terms from 30 days to 24 months and an attractive referral scheme when you recommend friends and family to the service.

## 30Mb Superfast broadband is now available

**Avonline Broadband can now provide high speed broadband wherever you live or work in Ireland.**

Delivering a blistering 30Mbps download and 2Mbps upload speed. So you can now have great internet access wherever you live (or work) – today!

## Speedy, easy set up

- We install a satellite dish outside
- Via a single cable, we connect this to a modem
- If purchased, we add a wireless router at the same time
- Connect to your computer, smartphone or tablet and you're online - fast!

As an ISO 9001 company, you can expect our installers to be consummate professionals. Your engineer will provide a full demonstration of your new equipment and won't leave until you're completely satisfied.

# So is Avonline's satellite broadband right for me?

We've covered how quick, simple and cost-effective it is to get satellite broadband to you wherever you live.

To recap, consider the questions below:

**Are you constantly frustrated by slow, no or unreliable broadband?**

**Are you unsure whether the government fibre rollout will reach you?**

**Would you like to do more online, saving time and money?**

**Do you pay over €230 every year for line rental just to get a bad broadband service?**

**Would you like to get better broadband next week?**

If you've answered yes to one or more of these questions, the chances are that Avonline's satellite broadband is right for you.

Why don't you find out why more people in the UK and Ireland have chosen their satellite broadband service than any other provider?
